

About Koha

The **About Koha** area will give you important server information as well as general information about Koha.

- *Get there:* More > About Koha

Server information

Under the **Server information** tab you will find information about the Koha version and the machine you have installed Koha on. This information is very important for debugging problems. When reporting issues to your support provider or to the various other support avenues (mailing lists, chat room, etc), it's always good to give the information from this screen. The time zone is handled via Koha or server configuration. For more information how to specify time zones per instance, see https://wiki.koha-community.org/wiki/Time_Zone_Configuration

About Koha

Server information	Perl modules	System information	Koha team	Licenses	Translations	Timeline
Server information						
Koha version:	17.12.00.044					
OS version ('uname -a'):	Linux kohadevbox 3.16.0-5-amd64 #1 SMP Debian 3.16.51-3+deb8u1 (2018-01-08) x86_64

Items listed in bold are required by Koha, items highlighted in red are missing completely and items highlighted in yellow simply need to be upgraded.

System information

This tab will provide you with warnings, such as deprecated system preferences, system preferences that are set without other required preferences, problems with the database, problems with patron relationships, problems with log files, etc.

If you are using ElasticSearch as a search engine in Koha, this tab will also display a warning if there are records that have not been indexed.
